Lab 11: Create custom CloudWatch dashboards

Make EC2 Instance :

STEPS

Step 1: Sign in to AWS Management Console

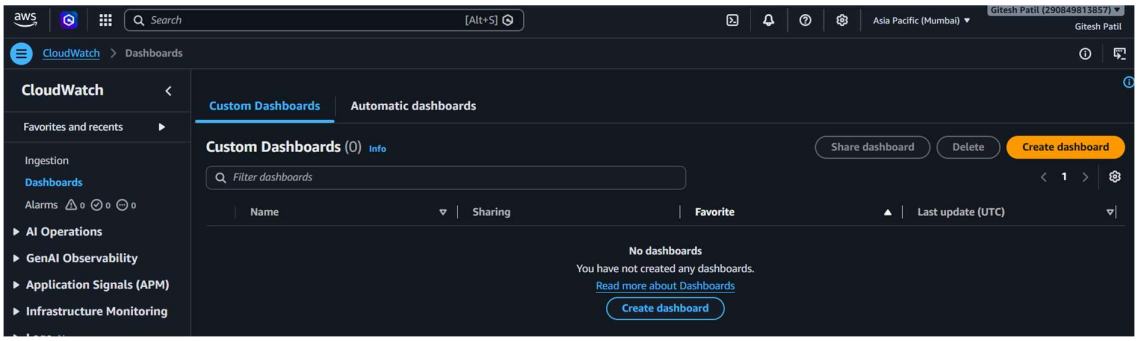

1. Open the AWS Management Console
2. Log in using your lab credentials

Step 2: Open CloudWatch

1. In the AWS Console search bar, type CloudWatch
2. Click CloudWatch

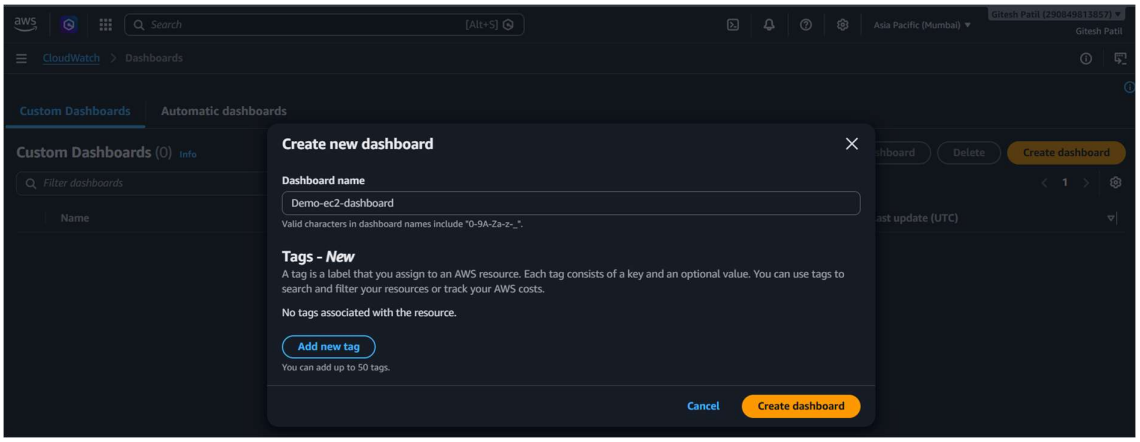

Step 3: Go to Dashboards

1. In the left navigation pane, click Dashboards
2. Click Create dashboard

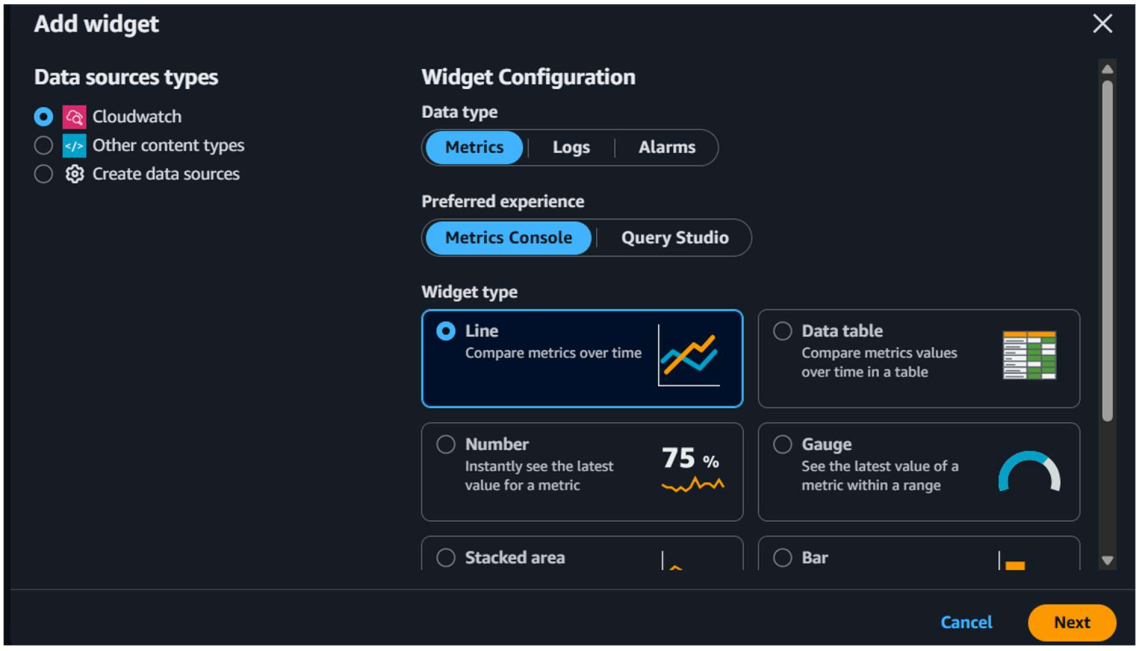

Step 4: Name the Dashboard

1. Enter a dashboard name (example):
2. Demo-EC2-Dashboard
3. Click Create dashboard

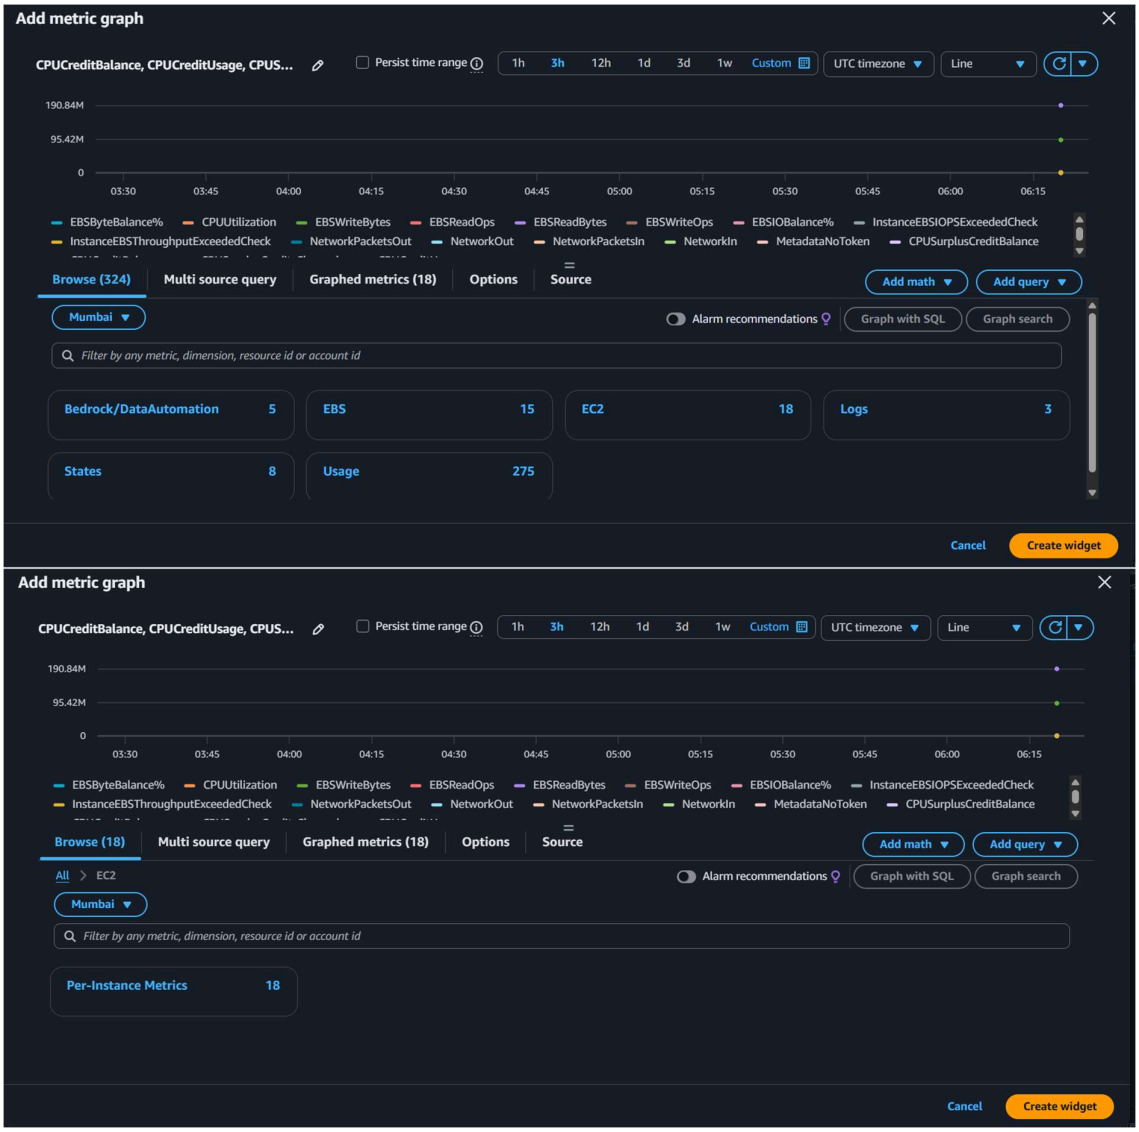

Step 5: Add the First Widget (Line Graph)

1. Select Line widget
2. Click Next

Step 6: Choose Metrics (EC2 Example)

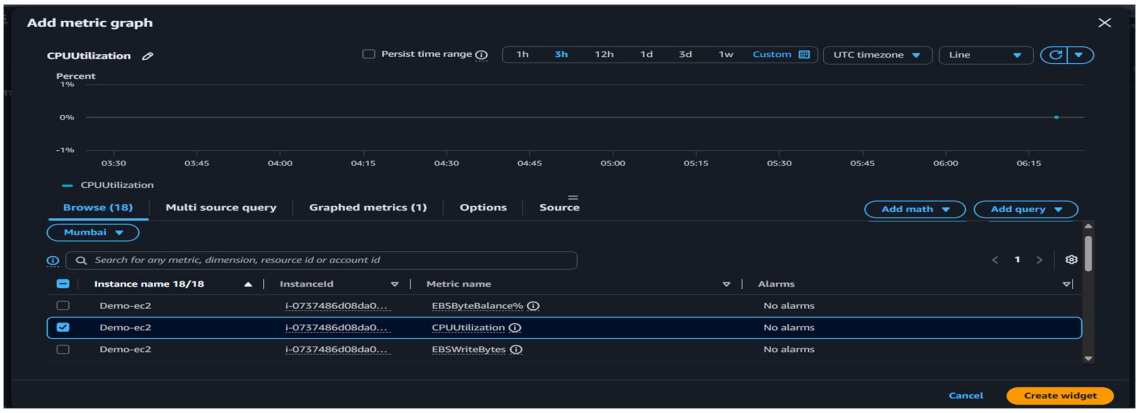

1. Select AWS namespaces
2. Click EC2
3. Click Per-Instance Metrics

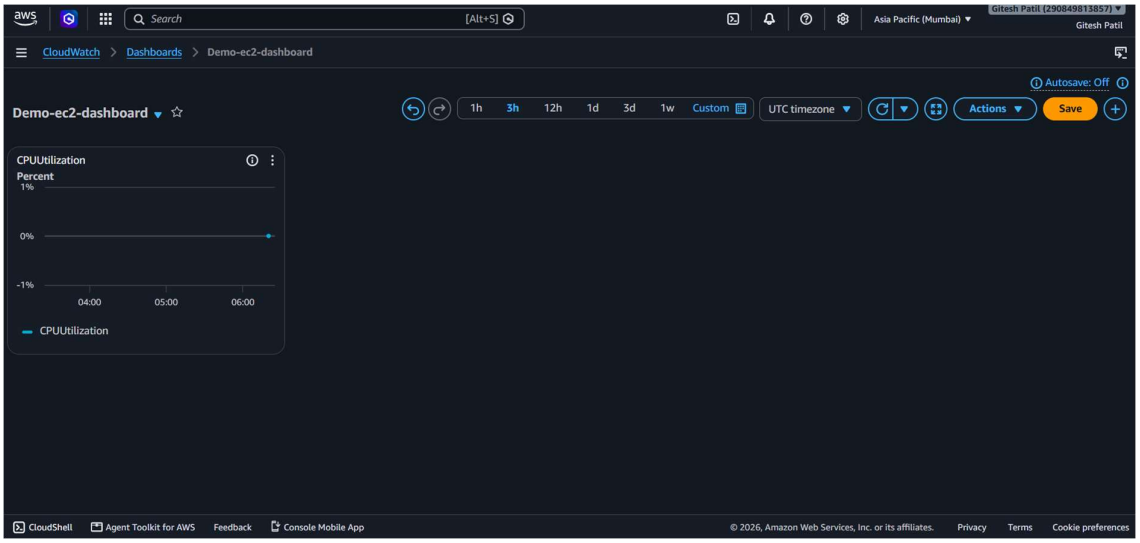

4. Select:

- CPUUtilization
- Choose one EC2 Instance ID

5. Click Create widget

You now see CPU utilization graphed over time.

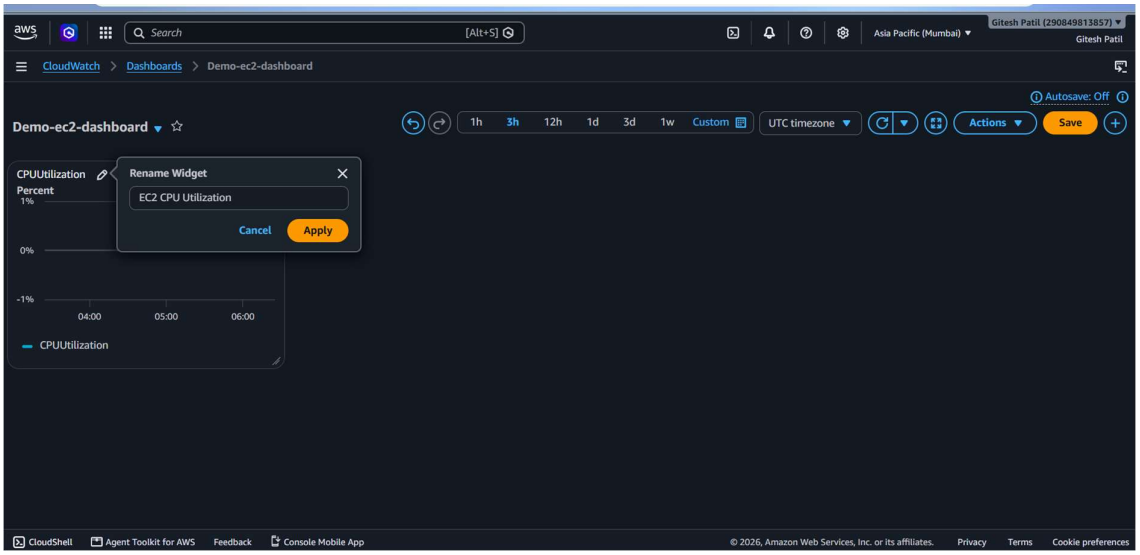

Step 7: Customize the Widget

1. Click the edit (pencil) icon on the widget

2. Customize:

- Title: EC2 CPU Utilization
- Statistic: Average
- Period: 5 minutes

3.Click Update widget

Step 8: Add a Number Widget

1. Click on + at top right end and Add widget
2. Select Number
3. Click Next

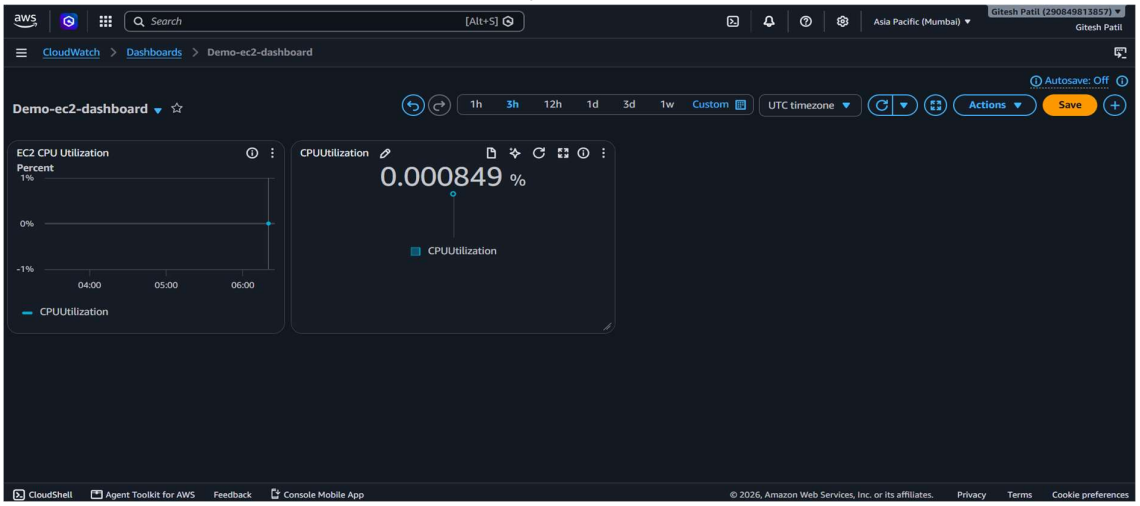

4. Choose:

- Namespace: EC2
- Metric: CPUUtilization
- Same Instance ID

5. Click Create widget

6. This shows the current CPU value numerically.

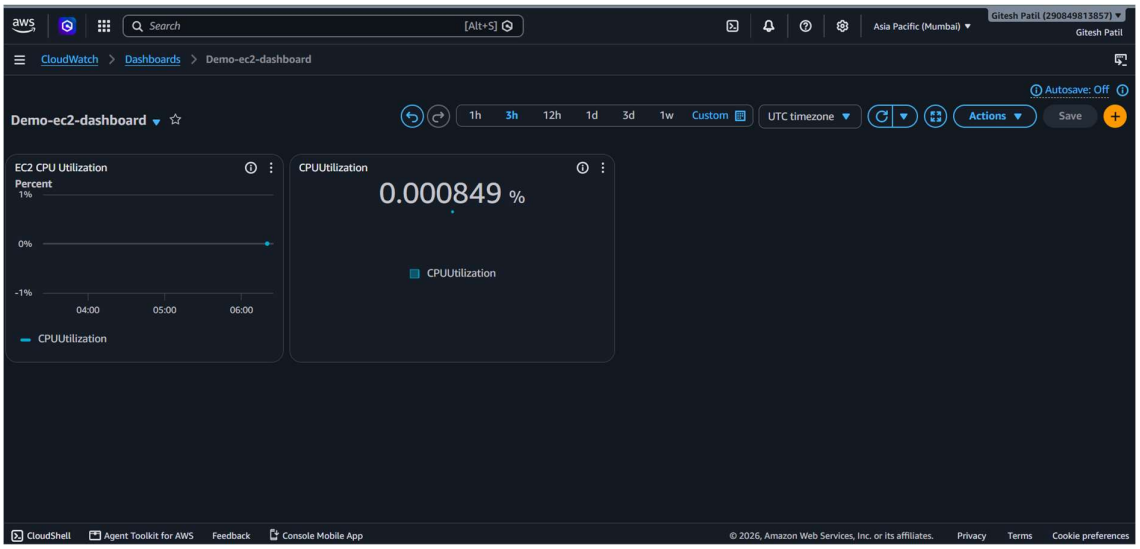

Step 9: Resize and Arrange Widgets

1. Drag widgets to rearrange

2. Resize by dragging the corners

3. Arrange for better visibilitv

Step 10: Save the Dashboard

1. Click Save dashboard
2. Confirm changes

Dashboard is now live and auto-updating.

We have successfully created a CloudWatch Dashboard !!
