Lab 04: Attach and Resize EBS Volumes

In this lab, we will be doing the following tasks:

. Create an EBS volume

. Attach it to an EC2 instance

. Resize the volume and extend the file system

Perquisites

. AWS account

. Running EC2 instance (Linux)

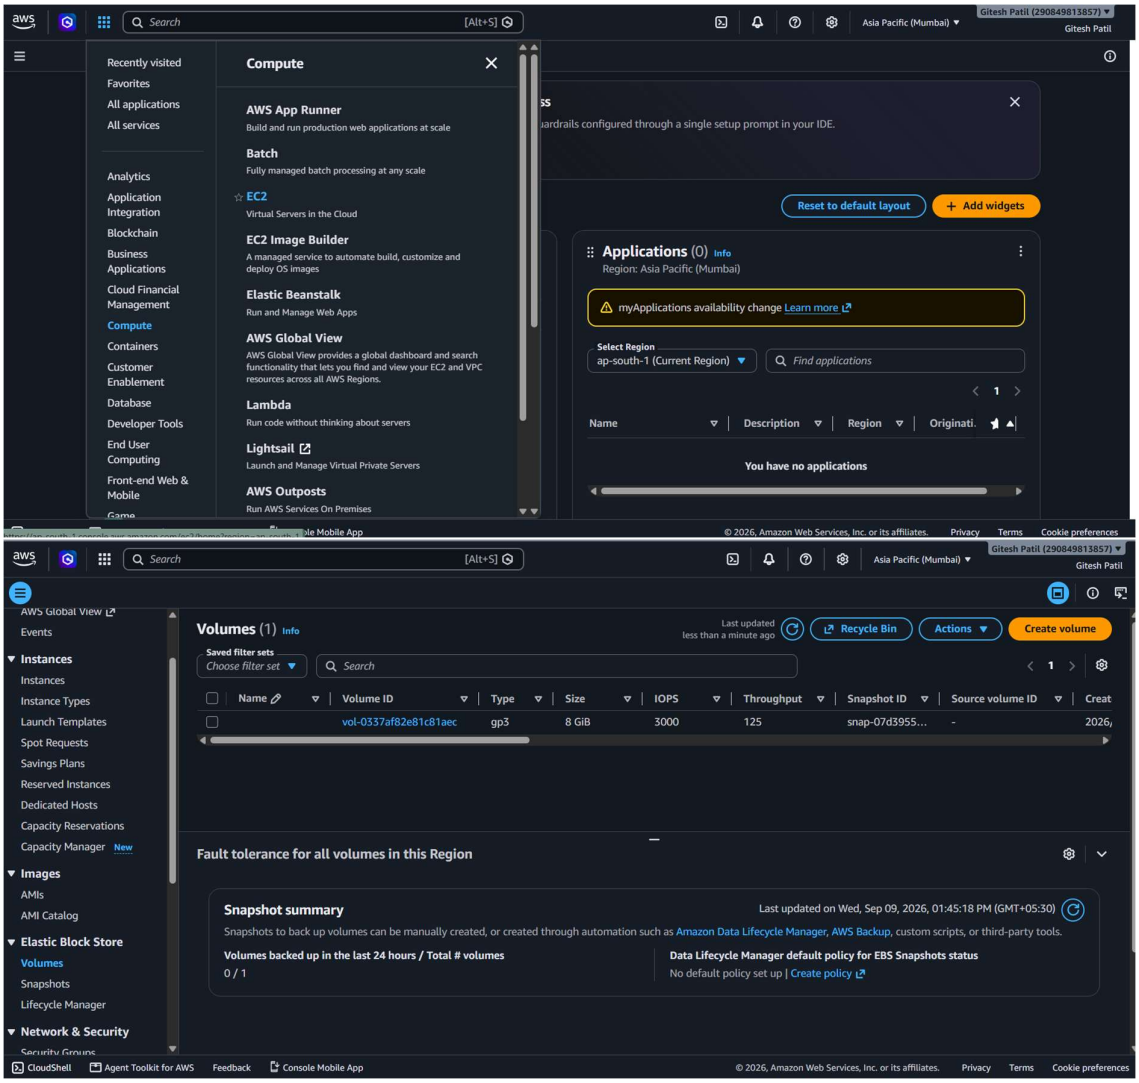

. IAM Policy:

```
{
"Version": "2012-10-17",
"Statement": [
{
"Effect": "Allow",
"Action": [
"ec2:CreateVolume",
"ec2:AttachVolume",
"ec2:ModifyVolume",
"ec2:DescribeVolumes",
"ec2:DescribeInstances"
],
"Resource": "*"
}
]
}
```

Steps:

1. Open a web browser and enter console.aws.amazon.com in the address bar and log in to your account.

2. From AWS Services, select EC2 under Compute

4. Click on the Create Volume button

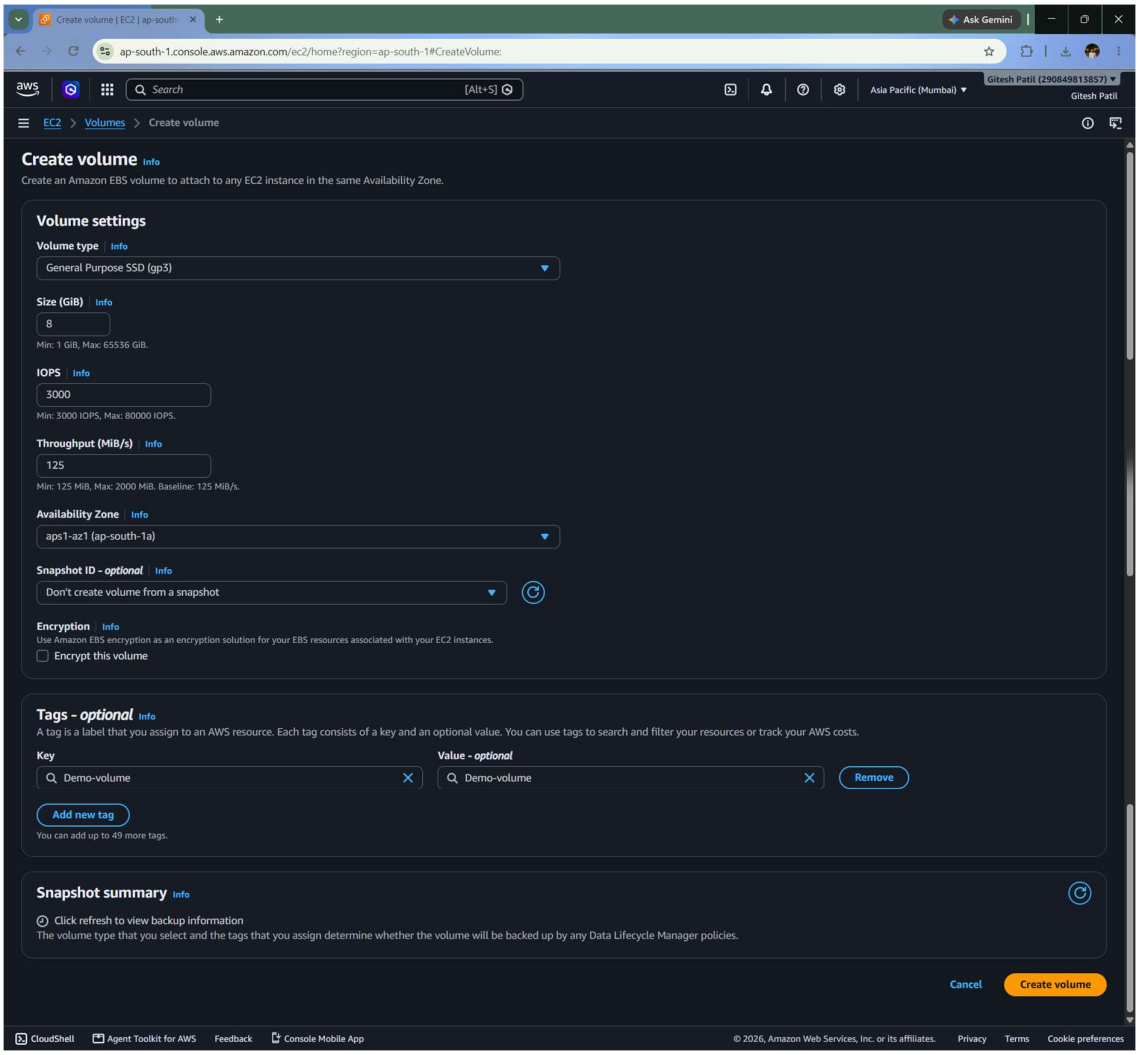

5. Configure:

. Volume type: General Purpose SSD (gp3)

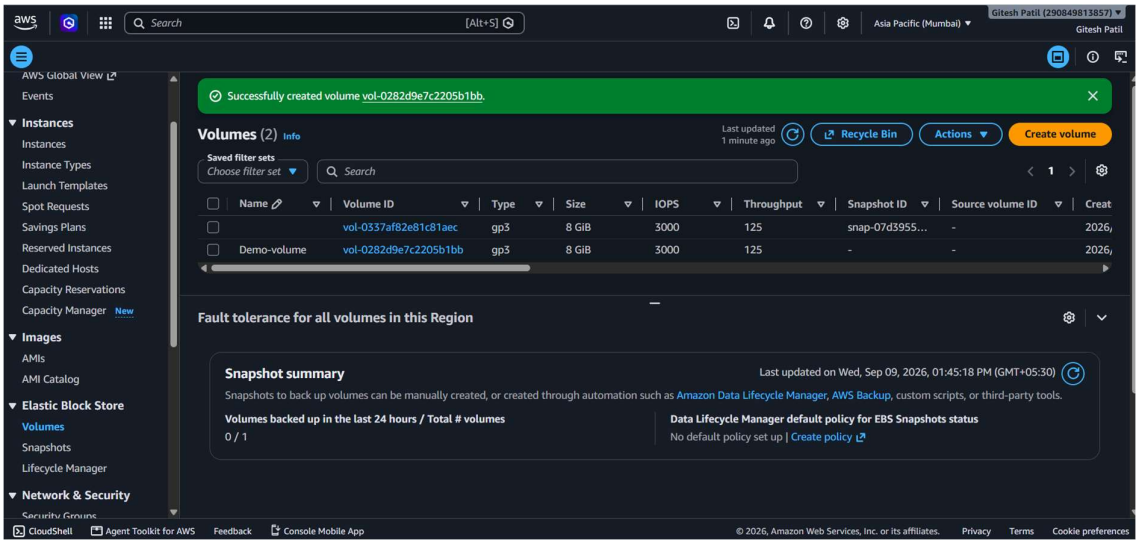

· Size: e.g., 8 GiB

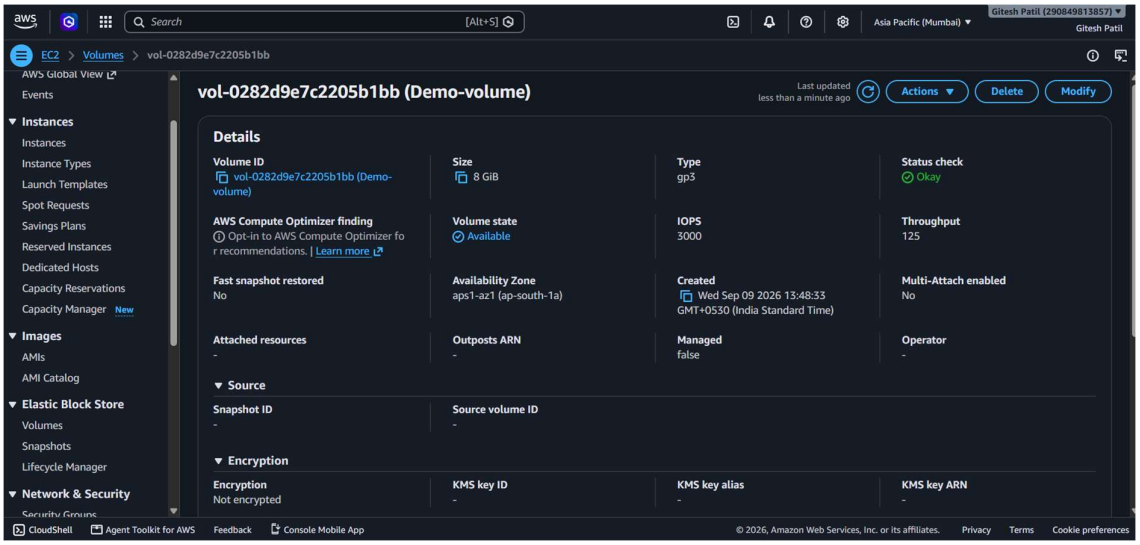

. Availability Zone: Select the AZ as same as your EC2 instance.

6. Click on the Add Tag button and add a Name tag and then click on the Create volume button at the end of the page.

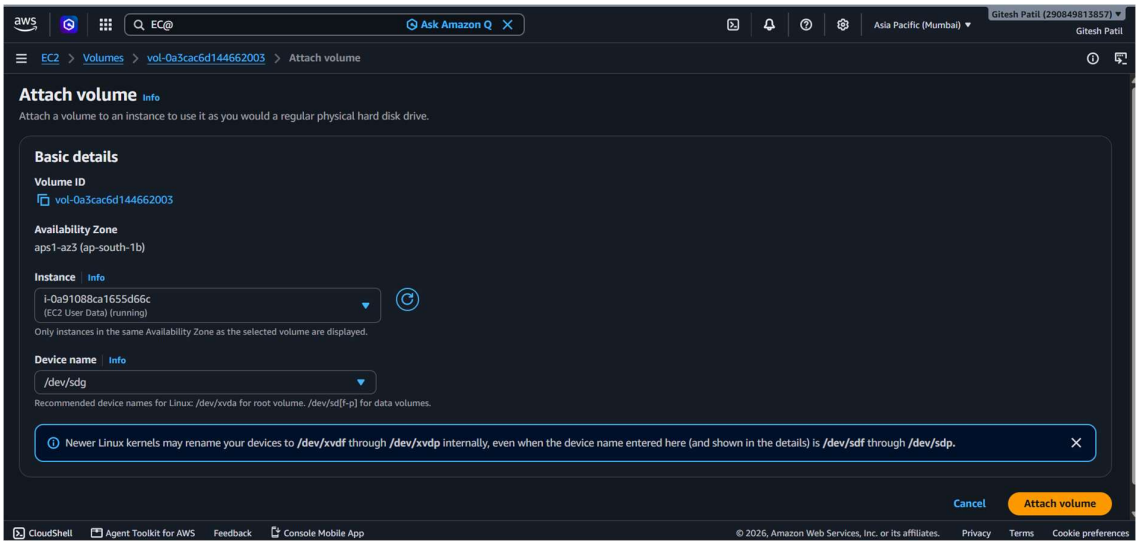

7. Open the details page of your volume and wait for the status to change to Available.

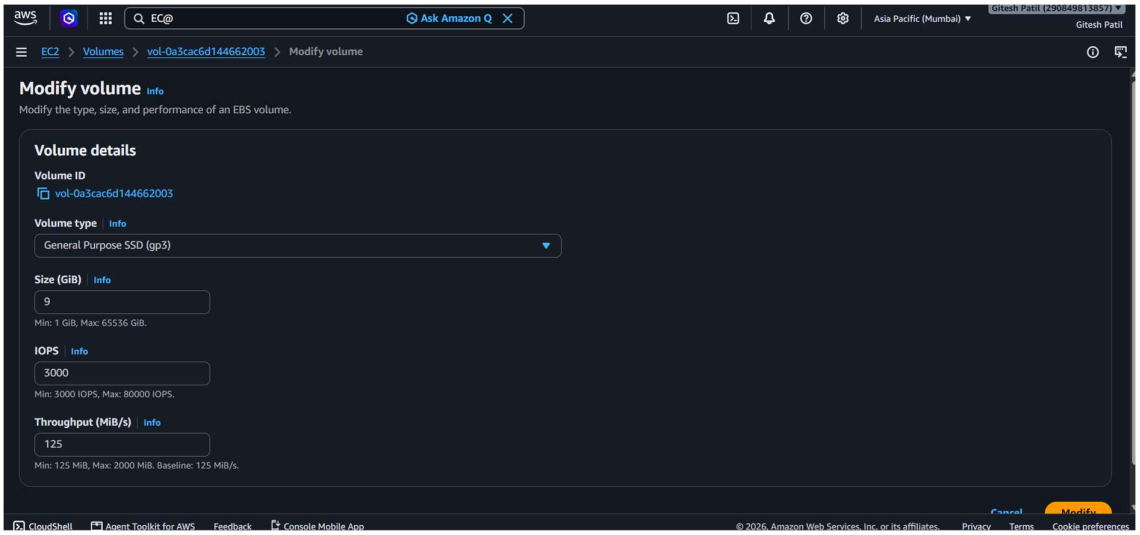

8. Once available, click on Actions -> Attach Volume

9. Now, select your instance id and then a device (eg., /dev/sdg) and click on Attach volume button.

14. Now to resize the EBS Volume, get back to the volume details page on the EC2

Console, and click on the Modify button.

Now, your volume would have been resized. You can verify the same in the volume details page.
